## Isolate/Create remix project

Our music production tutors are encouraging students to get involved with the fun new Isolate/Create remix project, which aims to give budding producers a creative outlet while in isolation. Artists including The Armed, Chelsea Wolfe, Converge, Pelican and Slow Mass have made recordings available for free, opening their tracks for anyone to download, remix and turn into new creations.

To get involved in the project you will need some kind of digital audio working station (DAW). For those of you who don't currently have access to Logic or a DAW, our music tutors suggest downloading a free DAW using the link below. There are options for PC and Mac - including a free version of Pro Tools!

Learning new software and taking part in the remix project will give you a good taste of what's involved in our BTEC Extended Diploma Music Production.

The project files can be downloaded from Reverb.com - and once you've made something new, they're asking that you share the work online with the #isolatecreate hashtag!
